Trust

Willingness to accept vulnerability
in the face of uncertainty

The knowledge deficit model

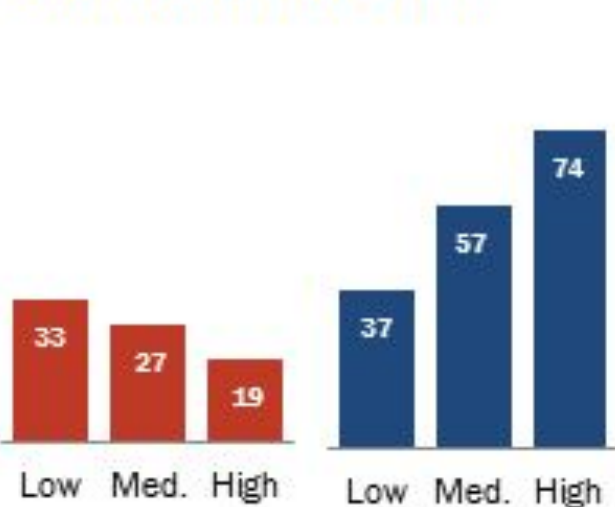

The knowledge deficit model

If they only understood . . .

. . . if they only knew what we knew . . .

Storms become more severe

Damage to forests and plant life

Science knowledge influences Democrats', but not Republicans', expectations for climate change harm

% of U.S. adults who say each of these is very likely to occur because of climate change

Rising sea levels that erode beaches and shorelines

Republican
Among those with ___ science knowledge

Democrat
Among those with ___ science knowledge

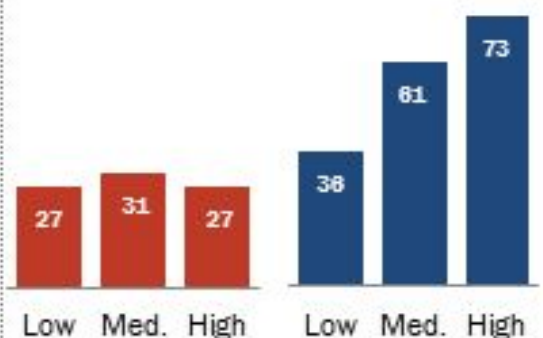

Storms become more severe

Harm to animal wildlife and habitats

Republican
Among those with ___ science knowledge

Democrat
Among those with ___ science knowledge

Damage to forests and plant life

Note: Republicans and Democrats include independents and other nonpartisans who "lean" toward the parties. Science knowledge based on nine-item index.

Source: Survey conducted May 10-June 6, 2016.

When we receive new information

Must I believe it?

Can I believe it?

Cultural cognition

Identity-protective reasoning

We endorse whatever position reinforces our connection to other people with whom we share important cultural commitments.

In politically charged debates, facts alone don't win arguments.

How we frame our story

How shall we communicate?

- Focus on the horrible things that are happening
- Describe a bright new future
- Describe how we can avoid losing things that we hold dear

**We have a better chance at
persuading people if . . .**

***We can agree that they are
right, rather than convince them
they are wrong.***

Keeping the elephant from leaning away

Moral Foundations Theory

- Jonathan Haidt and colleagues

Are we really that different?

Moral foundations theory

Loyalty/betrayal

Authority/subversion

Sanctity/degradation

Moral foundations theory

Harm/care

Fairness/cheating

Loyalty/betrayal

Authority/subversion

Sanctity/degradation

Liberty/oppression

What can we do with this?

- Facts and figures matter, but they rarely sway identity-based arguments.
- We all share common *moral foundations*
 - We can see and express merit in others' ideas if we can see them as moral people.
 - We can avoid triggering language.
 - We can learn to speak others' moral languages.

Trust

Willingness to accept vulnerability
in the face of uncertainty

Why do we trust?

Dispositional trust

Are some of us more trusting than others?

What is the baseline?

- Trust, distrust, or lack of trust?

Rational trust

- Calculus-based
- Predictions of outcomes of likely behaviors
- Performance

Rational trust

- Consistent performance
- Keeping promises
- Demonstrating competence – being good at what we do

Affinitive trust

“You had me at hello.”

- Emotional connections
- Assumptions of similar values
- Shared positive social experiences
- Response to charisma

Affinitive trust

- Active listening, responsiveness, and explicit caring
- Social interaction
- Exposing shared values

“Most people do not listen with the intent to understand; they listen with the intent to reply.”

- Stephen R. Covey

Systems-based trust

- Trust in procedures or the system to protect us
- Lessens the need for interpersonal trust

Trust-building systems

- Jointly developed and maintained procedures
- Interests, not positions
- Shared criteria for evaluating decisions
- Consequences (and second chances)
- Safe space for dissent

Trust ecology

Dispositional trust

- What is the baseline?

Rational trust

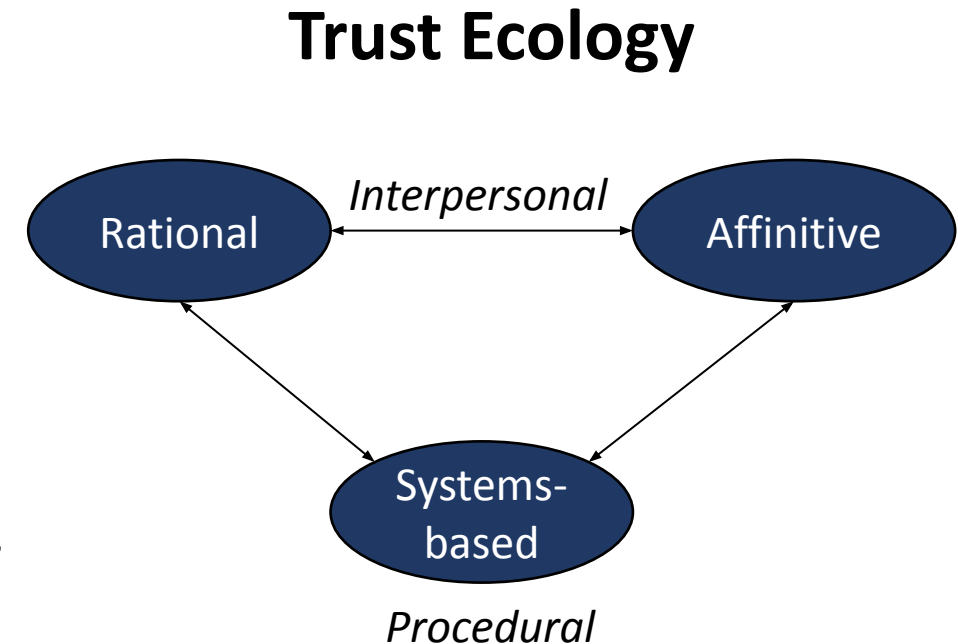

- Build an expectation of positive outcomes
 - Competence, consistency, costs and benefits

Affinitive trust

- Build positive social relationships
 - Genuine interaction, exposing common values or similarity, finding and expressing merit in the arguments of others

Systems-based trust

- Set up a structure to reduce risks
 - Consensus rules, transparency, fairness, accountability

Trust type	Basis	Assessment (strength, distribution)	Why is it this way?	What can we do about it?
Dispositional trust	Pre-dispositions of individuals to trust or distrust. Based on personal histories, culture, general hearsay, and innate tendencies.			
Rational trust	Based on evaluations of likely outcomes of predicted behavior. Based largely on assessments of prior performance, consistency, and competence.			
Affinitive trust	Based on perceptions of shared values or other affinities. Often through positive direct interactions in which responsiveness and active listening have been demonstrated.			
Systems-based (procedural) trust	Fair, transparent, and reliable procedures buffer individuals' degree of risk in potential trust relationships.			

Take home points

- Facts and figures matter, but they rarely sway identity-based arguments.
- We can empower people to believe they can avoid meaningful losses.
- We all share common ***moral foundations***
 - We can see and express merit in others' ideas if we can see them as moral people.
 - We can avoid triggers.
 - We can learn to speak others' moral languages.
- We can build rational, affinitive, and systems-based trust.

What do you think?

mjstern@vt.edu

Interest-based negotiation

- Separate people from the problem
- Focus on interests, not positions
- Established shared criteria for evaluating options
- Look for win-win possibilities

We are wired for stories

•What makes a good story?

- There is a problem
- There is a hero
- The hero makes a realization
- They overcome the problem
- The world changes
